## Deregulation or plain old theft?

## By Nancie G. Marzulla

ore than 30 years ago, hundreds of Americans invested in an idea: that communications satellites could benefit their nation and the world. The result was COMSAT, a Maryland-based share-holder-owned company that successfully launched the United States to the apex of the satellite industry.

Today, however, if a bill now being considered in Congress passes, these investments will be in jeopardy. Some in Congress and elsewhere seem to have forgotten the Constitution's Fifth Amendment

INTELSAT and Inmarsat, COMSAT has been bound by those organizations' operating agreements, which (among other things) obligate COM-SAT to meet all of INTELSAT and Inmarsat's capital investment calls. Moreover, COMSAT must seek FCC approval for every investment.

In exchange for living within these constraints, COMSAT was afforded an opportunity to earn a reasonable return on its investments. It also was given exclusive franchise in selling services using INTELSAT and Inmarsat satellites for communications to and from the United States. Access has never

tially, a parking place for a satellite in outer space) not in actual commercial use, despite the millions of dollars COMSAT, INTELSAT, and Inmarsat have invested in satellites intended for those slots;

■ Terminate existing services that COMSAT is providing to customers, as well as restricting the company's participation in new services (such as Internet access, high-speed data and interactive services) thus depriving Americans of advanced computer and video technologies.

Maybe some in Congress believe that this is the definition of progressive, fair and pro-competition legislation, but COMSAT and its shareholders aren't laughing about a bill that would knock this competitor out of the market in the name

of competition.

This bill would breach COMSAT's implicit but enforceable regulatory compact with the federal government. As the Supreme Court recently said when enforcing promises made by bank regulators to savings and loans institutions, Congress is free to change its policies and, as a result, to break a pledge to a private party. But if Congress does so, it must "insure the promise against loss arising from the promised condition's nonoccurrence."

The government also would have to compensate COMSAT for taking the company's property in violation of the Fifth Amendment's guarantee against uncompensated takings. The U.S. is liable for just compensation not just when it physically seizes real or personal property but also, as Justice Holmes said in 1922, "if regulation goes too far it will be recognized as taking?

Clearly, it is going "too far" to require COMSAT and its investors to bear the burden of a congressional decision to reverse course and exclude treaty organizations and their signatories from almost the entire field of satellite communications. If Congress were to order this, it would have to compensate companies for investments they made at the government's behest and approval — investments made specifically to solidify the U.S. as the satellite industry leader.

The provision that would invalidate existing contracts is even a more obvious and aggressive taking of private property. It is well recognized that contract rights are property rights, protected by the Constitution. Congress can no more abrogate existing contracts than it can take away tangible personal property without just compensation. Yet this bill would void current and future agreements negotiated between COMSAT and other parties.

Of course, deregulation must be pursued with vigor. At the same time, promises governments made to private companies, and on which investors based their investment, must be kept. Deregulation cannot be an excuse for the uncompensated confiscation of private property.

## Some in Congress and elsewhere seem to have forgotten the Constitution's Fifth Amendment prohibition against uncompensated "takings."

prohibition against uncompensated "takings." In their quest for dereg-ulation, they've proposed federal legislation that could end up costing the U.S. Treasury hundreds of millions, if not billions, of dollars to cover COMSAT's takings claims.

In the process, these "takers" would be sending a clear message to current and future investors: Risk your money, but don't expect the government to play by the rules if your investment pays off. With that kind of federal attitude, what sane investor would risk their hard-earned capital on today's fledgling companies that take huge financial and technological risks at the request of the government, as COM-SAT did in the 1960s.

In the Communications Satellite Act of 1962, Congress commissioned COMSAT to "establish in conjunction and in cooperation with other countries, as expeditiously and practicable, a commercial communications satellite system." At the time, this task was recognized to be a risky financial and technological undertaking. Congress's mandate led to the creation of the International Telecommunications Satellite Organization (INTELSAT), an international consortium that now includes some 140-member countries. A similar international organization, the International Mobile Satellite Organization, or "Inmarsat" was formed in 1978.

As the U.S. representative to

been a problem for customers; these services are energetically offered to all at non-discriminatory rates

During the 1960s and 1970s, INTELSAT and Inmarsat satellites were the only "birds" in the sky. American telephone companies and television networks needing satellite services had to purchase them from COMSAT. But since the early 1980s other companies have been allowed to launch competing communications satellite systems. These systems have been extremely successful

In addition to the growth of new, rival service providers, new technologies also have created more competition for satellites. For example, higher capacity fiber-optic undersea cable has become the favored mode of transmitting phone calls internationally. Today, 117 countries are directly connected to the United States by fiber-optic cable.

As a result of these technological and marketplace developments COMSAT now has only 21 percent of the market for international voice communications and about 42 percent of the market for international video transmission.

There are still those who inexplicably view COMSAT, a relatively small player in the communications marketplace, as a monopoly despite the fact that numerous suppliers serve the market today. Believers in the "monopoly power" of COMSAT have introduced a bill in Congress that would, among other things:

Authorize customers to abrogate their existing contracts with

■ Require the immediate surrender of allocated orbital slots (essen-
